

Effective warning for forklift traffic

Safety Door Light SDL

for doors that lead directly onto the driveway

The Safety Door Light warns!

when a person comes out of the door - at the moment the door is opened a crack. The Safety Door Projector then throws a conspicuous traffic sign on the floor. Drivers can react in good time because they recognise „Attention“ - a person is coming out of this door.

Active warning helps to prevent accidents!

The active warning of the Safety Door Light is more effective than any permanent traffic sign. The active warning is signalled before the danger arises. Reliable and effective

Used, innovative technology

makes the Safety Door Light a simple plug & play system. Screw on above the door, plug into the socket and fix the door contact in the door frame – without any cabling

Simple installation, no cable laying required

When the door is opened, the special, battery-free door contact generates sufficient energy (voltage) to reliably activate the projector.

No complex cable laying is required between the door contact and the Safety Door Light SDL.

Technical data

| | |
|---|-----------------------------------|
| Powerful projector: | 15 W; 720 lumen |
| Projection size at 2.3 m height: | 0.5 m D _{rm} ; 1.660 Lux |
| Dimensions (W x H x D): | 212 x 222 x 169 mm |

Choice of traffic sign designs

Suitable for the Safety Door Light projector:

THE INTELLIGENT ROUND MIRROR

The GSA-207 Hazardous Situation Indicator for active intersection safety
